                                                                                                                                                                                                                                                                                                                                           -1 TISSUE SPECIFICITY: Ubiquitcusly expressed.
-1 TISSUE SPECIFICITY: Ubiquitcusly expressed.
-1 SIMILARITY: Belongs to the plakin or cytolinker family.
-1 SIMILARITY: Contains 1 actin-binding domain.
-1 SIMILARITY: Contains 2 calponin-homology (CH) domains.
-1 SIMILARITY: Contains 2 FP-hand calcium-binding domains.
-1 SIMILARITY: Contains 1 SH3 domain.
-1 SIMILARITY: Contains 37 spectrin repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Corby N.; Submitted (AUG-2000) to the EMBL/GenBank/DDBJ databases.

The complete nucleotide sequences of 400 mouse KIAA-homologous connections identified by screening of terminal sequences of cDNA clones andomly sampled from size-fractionated libraries."; DNA Res. 10:35-48(2003).
-!- FUNCTION: Probably involved in maintaining Golgi structure (By

similarity).
SUBCELLULAR LOCATION: Cytoplasmic; peripheral membrane protein associated with the trans-Golgi network (by similarity).
DOMAIN: Extended rod-like protein with coiled-coil domains.
SIMILARITY: Belongs to the golgin family.
SIMILARITY: Contains 1 GRIP domain.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Coiled coil (Potential).

Batent No. 6562958

GRNERAL INFORMATION:

APPLICANT: Gary L. Breton et al.

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER

TITLE OF INVENTION: BADWANNII FOR DIAGNOSTICS AND THERAPEUTICS

FILE REPERENCE: GTC99-03PA

CURRENT FILING DATE: 1999-06-04

NUMBER OF SEQ ID NOS: 8252

SEQ ID NO 6664
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 3, Application US/09000040B

Patent No. 6551795
GENERAL INFORMATION:
APPLICANT: Marc J. Rubenfield et al.
APPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS TITLE OF INVENTION: ABRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: ABRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT APPLICATION NUMBER: US 60/094,788
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR PELING DATE: 1998-02-18
PRIOR PELING DATE: 1998-02-18
PRIOR APPLICATION NUMBER: US 60/094,190
PRIOR FILING DATE: 1998-07-27
NUMBER OF SEQ ID NOS: 33142
SEQ ID NO 20001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     General 28655, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

CURRENT APPLICATION NUMBER: US/09/252,991A

CURRENT FILING DATE: 1999-02-18

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR APPLICATION NUMBER: US 60/094,190

SEQ ID NO 28655

LENGTH: 445
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ; OTHER INFORMATION: Identity of amino acid at the above locations are unknown. Database :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 141, Application US/10012542
Patent No. 6627741
GENERAL INDERMATION:
APPLICANT: Ruben et al.
TITLE OF INVENTION: 94 Human Secreted Proteins
TITLE REFERENCE: PZ02991
CURRENT APPLICATION NUMBER: US/10/012,542
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               TYPE: PRT
CRGANISM: Homo sapiens
US-09-461-325-141
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RESULT 2
US-10-012-542-141
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                원
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 2, Appliance 2, Appliance 2, Appliance 1, Appliance 1, Appliance 29447, A Sequence 21557, A Sequence 2, Appliance 43, Appliance 41, Appliance 41, Appliance 6, Applia

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Anopheles Genome Sequencing Consortium;
Submitted (MAR-2002) to the EMBL/GenBank/DDBJ databases.
-!- CAUTION: The sequence shown here is derived from an
EMBL/GenBank/DDBJ whole genome shotgun (WGS) entry which is
preliminary data.

DOTTELL N., Ahmed A.H., Moss S.H.;

"Photoreactivation in a phrB mutant of Escherichia coli K-12: evidence for the role of a second protein in photorepair.";

Photochem. Photobiol. 58:831-835(1933).

-! FUNCTION: Involved in the transport of molybdenum into the cell.

Involved in photorepair. Could act on UV-induced DNA damage other than pyrimiddine dimers.

-! SUBCELLULAR LOCATION: Inner membrane associated (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Oshima T., Alba H., Baba T., Fujita K., Hayashi K., Honjo A., Ikemoto K., Inada T., Itoh T., Kajihara M., Kanai K., Kashimoto K., Kitagawa M., Makino K., Masuda S., Miki T., Mizobuchi K., Mamira S., Kitagawa M., Makino K., Masuda S., Miki T., Mizobuchi K., Sampei G., Seki Y., Tagami H., Takemoto H., Nishio Y., Saito M., Yano M., Horiuchi T.;
